academic background

2010 - 1st year - iasi, "g.m. cantacuzino" faculty of architecture

2011 prof. dr. arch. tudor gradinaru, drd. arch. calin corduban

2011 - 2nd/3rd year - bucharest, "ion mincu" institute of architecture

2013 prof. dr. arch. adrian spirescu, dr. arch. mihaela pelteacu

dr. arch. andrei lakatos, drd. arch. anca pasarin

2013 - 4th/5th year - bucharest, "ion mincu" institute of architecture

2014 prof. dr. arch. dorin stefan, dr. arch. mario kuibus, dr. arch. dan dinoiu

+ 2015 - 5th year, 2nd semester - vaduz, university of liechtenstein, scholarship
dipl. arch. eth/swb conradin clavuot, associate prof. peter staub,
tutor dr. arch. robert mair

+ 2016 - "arts and crafts school in brasov" - master thesis project

professional background

+ 2012 - june, 2nd prize, "casa" international annual competition for architecture students

2013 - july, portoacademy workshop with thomas raynaud , porto, portugalia

+ 2013 - august/october, internship @ igloo architecture, bucharest, romania

2014 - may, volunteer at rocad, bucharest, romania

2014 - july, becoming local workshop, bucharest, romania

2014 - october, volunteer at films des cannes, bucharest, romania

2014 - october, "articulation" exhibition at carol53, bucharest, romania

2014 - november, archicad & artlantis diploma

+ 2015 - august/december, internship @ conradin clavuot, chur, switzerland

2016 - january, 1st prize Fanas competition, switzerland @ clavuot bureau

+ 2016 - march, "dupa neagu" workshop/exhibition with sorin dumitrescu, bucharest, romania

To whom it may concern,

During a period of nine months I have had the chance as an architect and professor of talking, debating and knowing Serghe Constantin Ovidiu. I am writing you in order to support Ovidiu's process throughout the architectural profession.

I met Ovidiu during his Master studies at the University of Liechtenstein in the Summer Semester of 2014/2015. He attended my Design Studio and Seminar which I held there, discussing about the Sufficiency of Old Cities including a variety of subjects from conservation and restauration to proposing new typologies and buildings in the existing context. After observing his evolution across the semester I can conclude that he is a very productive person which works well under pressure, managing to use a variety of tools such as models, sketches, historical analysis and input from the professors in order to develop his project. His ability to evolve from one meeting to another being self-critical helped him to have in the end a project which was appreciated at the final review by the jury.

These facts confirmed me that Ovidiu could be part of my architectural office which I have in Chur, Switzerland, proposing him to have a four months internship which he accepted. During his working period from August to December 2015, he faced a variety of tasks concerning the projects which we had in development. The main difference between studying at the university and working in a studio was the ability to work in a team, developing projects by working with other people, sharing and receiving advices in order to continue the architectural processes. He participated in multiple projects fulfilling all the given tasks proving that he can adapt to different environments of work and types of projects, being a dedicated person, fast learner and motivated to do his best. Ovidiu has a strong character, having the abilities to produce quality results in a wide variety of areas, being organized, self-confident and a creative person.

I highly recommend that you consider his application considering the above mentioned impressions which he proved to me during our different working environments such as university and architectural office. I will be pleased to answer any additional questions you may have.

Sincerely,

Dipl. Architect ETH/SWB Conrardin Clavuot

academic project
sufficiency in the medieval city, rapperswil, ch
february/june 2015
2nd semester, 5th year

Sufficiency in the medieval cities can be summarised through the following 5 bulletpoints

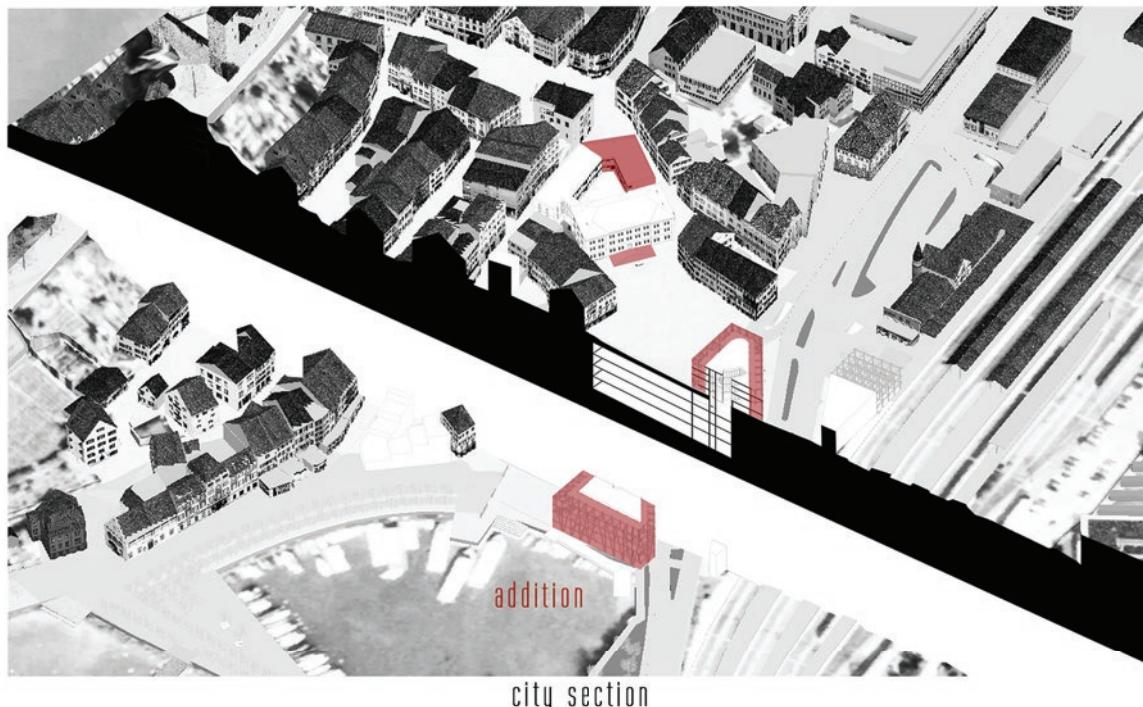

Helping eachother by sharing common activities, using the space together and interacting daily, keeping it this way always socially active

Interdependency between people, spaces and activities which will be the source of constant new energies within the community

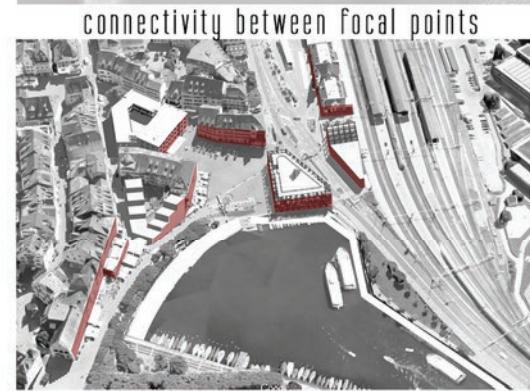

Equilibrium between residents/tourists, elderly/young, public/private place, land/water, built/unbuilt spaces etc., this way creating a framework where people can live the experience of enough

Learning from the past, keeping the identity of the city by using the existent, adapting it and creating new ways of living it by revalidating every ones value systems

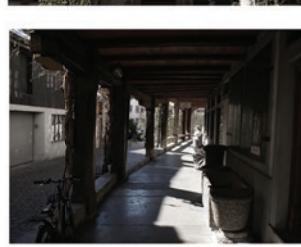

Diversity in the medieval cities will help them adapt to the present times, making them more than a place to visit and in fact a place where you can live, work and rest

enclosing the plaza/opening it to the lake

activating the edges

wood constructions in rapperswil
using the fachwerk system as a new way of creating space.

evolution periods of the city during its process of development, the methods of construction evolved creating a clear structure and identity of the city learning from the techniques that were applied in the past and adapting them to the people's and city needs in order to continue the evolution of the community.

inbetween spaces
within the wood buildings, spaces which connect the two sides of the city, the public and private can provide shelter, shade, places where people can go through or stay to rest

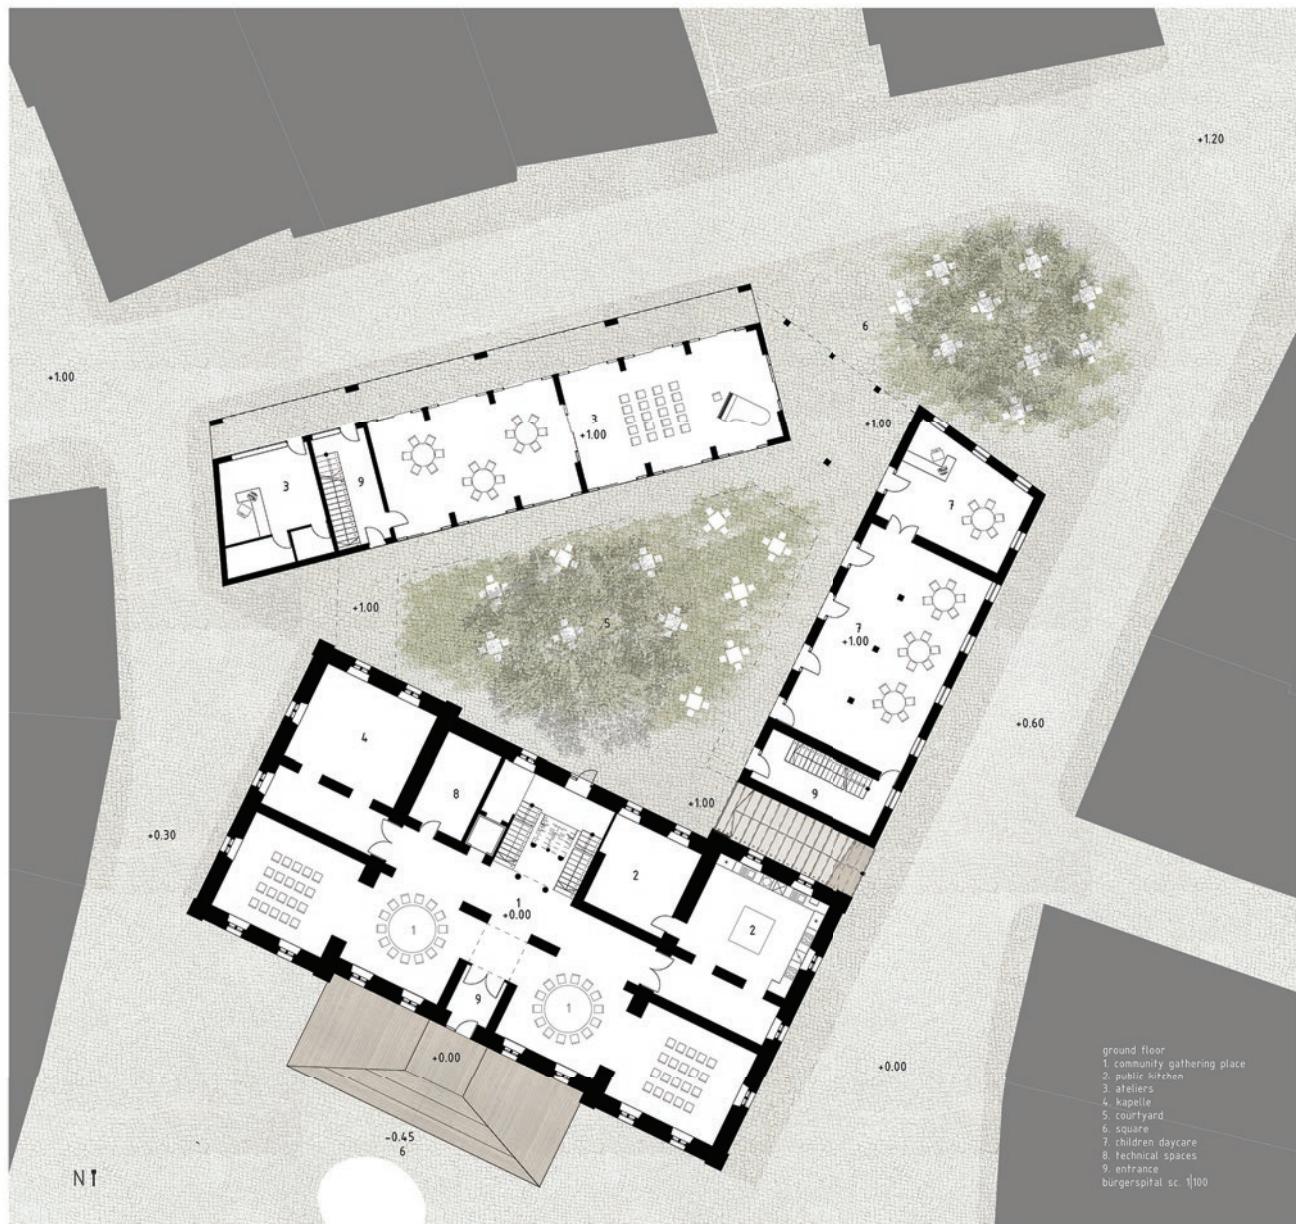

the principle is applied for the building not only horizontally but also vertically

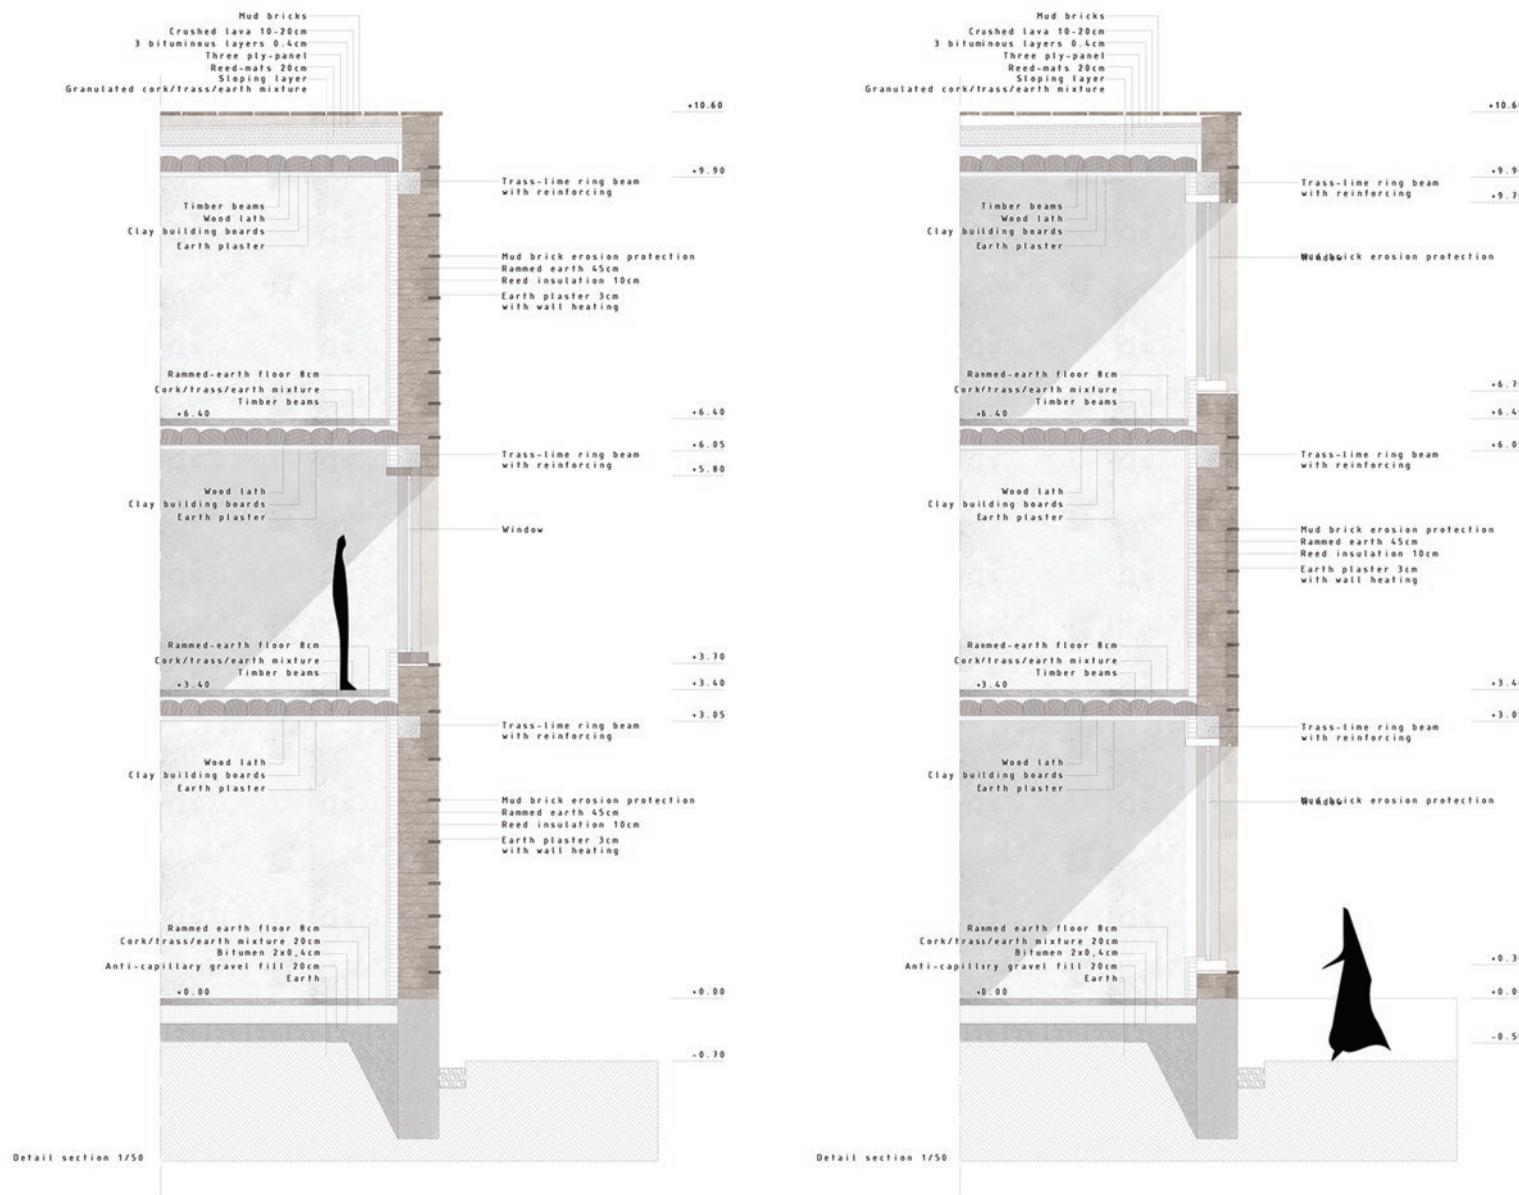

hybrid constructions
built spaces such as the one from the monastery have a mixed use of materials such as wood and stone creating a relation between void and fill, light and heavy, the use of materials are according to the space's needs.

this principle can be found in the proposals as well, by working either with existing structures such as the ones from concrete or proposing new ones which use the mixture of different techniques such as rammed earth, wood and concrete.
